Google Cybersecurity

Those who earn the Google Cybersecurity Certificate have completed eight courses, developed by Google, that include hands-on, practice-based assessments and are designed to prepare them for entry-level roles in cybersecurity. They are competent in beginner-level Python, Linux, SQL, Security Information and Event Management (SIEM) tools, and Intrusion Detection Systems (IDS). They know how to identify common cybersecurity risks, threats, and vulnerabilities, as well as the techniques to mitigate.

Advanced Business Analytics

In this specialization learners developed a comprehensive understanding of the entire lifecycle of analytics that they can apply to grow your business, increase profits, and create maximum value for shareholders. They gain such data analytics skills as extracting and manipulating data using SQL code, executing statistical methods for descriptive, predictive, and prescriptive analysis, and interpreting, presenting and discussing analytic results.

Data Analysis and Presentation Skills: the PwC Approach

In this specialization you learned the role of data in today's business environment. By focusing on the practical uses of data analytics, you learned how better understanding and stronger application of data can enhance problem-solving and decision-making. You used Excel to understand, filter and use data to inform decision-making. You learned how to use a variety of tools to help you in the process. Finally, using data to support a point of view, you created a business presentation to effectively relate the view to others. This certificate is issued by PricewaterhouseCoopers LLC (US) with address at 300 Madison Avenue, New York, New York, 10017.

Quantitative Research

Research Report: Delivering Insights

In this Specialization, learners gained the skills to conduct market research within their organization. The Specialization covered the necessary skills of initiating and responding to a research project request, of identifying a target audience, and conducting basic research through multiple research modes. Learners also analyze the research data, manage suppliers performing specialized research, and deliver recommendations and insights of the findings to key stakeholders. This Specialization builds on the skills from conception of a market research project through data collection and analysis to presentation to demonstrate learned skills.

Strategic Management and Innovation

This Specialization explores the evolving world of business strategy, focusing on the increasingly important roles of design, user experience, and innovation in shaping competitive advantage. You'll learn about concepts such as goal setting, value creation, global integration, and diversification, and you'll critique classic theories and frameworks in the context of new business realities. In the final Capstone Project, you'll create and defend a holistic business strategy in response to a realistic case study prompt.

Financial Technology (Fintech) Innovations

This specialization is intended to familiarize learners with a broad range of financial technologies. By completing this specialization the learner can explain concepts in payment technologies, cryptocurrency and blockchain, credit scores and technologies, and smart investing techniques. Understanding business use cases for each of these technologies through practical exercises, the learner is prepared to select and analyze financial technologies appropriate for their own organization.
